No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The nucleic acids may be used for recombinant production of BEER, gene therapy, antisense therapy, as probes for diagnostic assays and for functional studies. BEER may be used to raise antibodies and for identification of BEER modulators. BEER antagonists may be used to increase bone mineral content for the treatment of disorders such as osteopenia, osteoporosis, fractures and other disorders associated with low mineral content.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This cDNA encodes a human transforming growth factor-beta (TGF-beta) binding protein designated BEER. The hBEER gene has been localized to the chromosome 17q12-21. The cDNA and protein may be used for prevention, treatment and diagnosis of diseases associated with inappropriate BEER expression. For example, they may be used to treat disorders associated with decreased TGF-beta BP expression. The cDNA or

The encoded protein CC comprises a substitution of isoleucine for the wild-type valine at CC residue 10. The cDNA and protein may be used for prevention, treatment CC and diagnosis of diseases associated with inappropriate BEER expression. CC for example, they may be used to treat disorders associated with CC decreased TGF-beta BP expression. The cDNA or vectors may be administered to treat diseases by rectifying mutations or deletions in a patient's CC genome that affect the activity of BEER by expressing inactive proteins CC or to supplement the patients own production of BEER proteins The CC nucleic acids may be used for recombinant production of BEER, gene therapy, antisense therapy, as probes for diagnostic assays and for identification of BEER may be used to raise antibodies and for identification of BEER modulators. BEER antagonists may be used to steopenia, osteoporosis, fractures and other disorders associated with CC ow mineral content.

This cDNA encodes a murine transforming growth factor-beta (TGF-beta) binding protein designated mBEER. The cDNA and protein may be used for prevention, treatment and diagnosis of diseases associated with the conservation of treatment and diagnosis of diseases associated with the conservation of disorders associated with decreased TGF-beta BP expression. The cDNA or vectors may be administered to treat diseases by rectifying mutations or conservation in a patient's genome that affect the activity of BEER by conservation of BEER polypeptides. The nucleic acids may be used for recombinant correction of BEER polypeptides. The nucleic acids may be used for recombinant constitution of BEER appears and for identification of BEER modulators. BEER antagonists may be used to increase bone mineral content for the treatment of disorders such as osteopenia, osteoporosis, fractures and other disorders associated with low mineral content.

X This cDNA encodes a rat transforming growth factor-beta (TGF-beta) binding protein designated rBEER. The cDNA and protein may be used for prevention, treatment and diagnosis of diseases associated with inappropriate BEER expression. For example, they may be used to treat disorders associated with decreased TGF-beta BP expression. The cDNA or vectors may be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of BEER by expressing inactive proteins or to supplement the patients own production of BEER, polypeptides. The nucleic acids may be used for recombinant production of BEER, gene therapy, antisense therapy, as probes for alignostic assays and for functional studies. BEER modulators. BEER antagonists may be used to increase bone mineral content for the treatment of disorders such as osteopenia, osteoporosis, fractures and other disorders Nucleic acids (I) encoding a transforming growth factor beta binding protein, useful for identifying agents for treating osteopenia, osteoporosis and fractures Sequence disorders such a associated with Brunkow ME, Van Ness J, 27-NOV-1998; (DARW-) 2000-412321/35.)B; AAY96433. osteoporosis and fractures Nucleic acids (I) encoding a transforming growth factor beta binding protein, useful for identifying agents for treating osteopenia,

English.

disorders associated with decreased TGF-beta BP expression. The cDNA or vectors may be administered to treat diseases by rectifying mutations or deletions in a pattient's genome that affect the activity of BEER by expressing inactive proteins or to supplement the patients own production of BEER, polypeptides. The nucleic acids may be used for recombinant production of BEER, gene therapy, antisense therapy, as probes for diagnostic assays and for functional studies. BEER may be used to raise antibodies and for identification of BEER modulators. BEER antagonists may be used to increase bone mineral content for the treatment of disorders such as osteopenia, osteoporosis, fractures and other disorders associated with low mineral content. This cDNA encodes a rat transforming growth factor-beta (TGF-beta) binding protein designated rBEER. The cDNA and protein may be used fo prevention, treatment and diagnossis of diseases associated with inappropriate BEER expression. For example, they may be used to treat for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               QY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          В
                                           This cDNA encodes a murine transforming growth factor-beta (TGF-beta) binding protein designated mBEER. The cDNA and protein may be used for prevention, treatment and diagnosis of diseases associated with inappropriate BEER expression. For example, they may be used to treat disorders associated with decreased TGF-beta BP expression. The cDNA or vectors may be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of BEER by expressing inactive proteins or to supplement the patients own production of BEER polypeptides. The nucleic acids may be used for recombinant production of BEER, gene therapy, antisense therapy, as probes for diagnostic assays and for functional studies. BEER may be used to raise antibodies and for identification of BEER modulators. BEER antagonists may be used to increase bone mineral content for the treatment of
                                                                                                                                                                                                                                Claim 1; Page 123; 162pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This cDNA encodes a bovine transforming growth factor-beta (TGF-beta) thinding protein designated bbEER. The cDNA and protein may be used for prevention, treatment and diagnosis of diseases associated with fragrentian treatment and diagnosis of diseases associated with consider the protein associated with decreased TGF-beta BP expression. The cDNA or CC disorders associated with decreased TGF-beta BP expression. The cDNA or CC deletions in a patient's genome that affect the activity of BEER by certifying mutations or CC deletions in a patient's genome that affect the activity of BEER by cC expressing inactive proteins or to supplement the patients own production of BEER polypeptides. The nucleic acids may be used for recombinant CC production of BEER, gene therapy, antisense therapy, as probes for CC diagnostic assays and for identification of BEER modulators. BEER antagonists and be used to increase bone mineral content for the treatment of disorders such as osteopenia, osteoporosis, fractures and other disorders associated with low mineral content.

It was isolated from a human kidnay cDNA library containing exons 1 and 4 of the sequence. HDCR6 is closely related to the DAN and DCR5 proteins, bot which act as antagonists of morphogenic proteins such as BMP. It is possible that the hDCR6 gene and protein can be used as immunogens, modulators of cell function, growth and differentiation, to reduce undestrable bone formation, to identify DCR6 binding agents, in

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      protein search, using sw model

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The coding sequence was isolated from a human kidnay cDNA library containing exons 1 and 4 of the sequence, HDCR6 is closely related to the DAN and DCR5 proteins, both of which act as antagonists of morphogenic proteins such as BMP. It is possible that the hDCR6 gene and protein can be used as immunogens, modulators of cell function, growth and differentiation, to reduce undesirable bone formation, to identify DCR6 binding agents, in diagnosis, and in gene therapy.

RESULT 2 US-09-188-930-286 ; Sequence 286, Application US/09188930A ; Patent No. 6150502 ; GENERAL INFORMATION:

```
APPLICANT: Watson, James D.
APPLICANT: Strachan, Lorna
APPLICANT: Strachan, Lorna
APPLICANT: Oncust, Rene
APPLICANT: Oncust, Rene
APPLICANT: Murison, James Greg
TITLE OF INVENTION: Compositions Isolated From Skin Cells
TITLE OF INVENTION: and Methods For Their Use
FILE REFERENCE: 11000.1011c1
CURRENT APPLICATION UNMBER: US/09/188,930A
CURRENT FILING DATE: 1998-11-09
NUMBER OF SEQ ID NOS: 348
SOFTWARE: FastSEQ for Windows, Version 3.0
LENGTH: 206
TYPES: DEPT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       da
